"Escherichia coli rpiA gene encoding ribose phosphate isomerase A.";
J. Bacteriol. 175:5628-5635(1993).
-1- FUNCTION: SPECIFIC INHIBITOR OF CHROMOSOMAL INITIATION OF
REPLICATION IN VITRO. BINDS THE THREE 13-MERS IN THE ORIGIN
(ORIC) TO BLOCK INITIATION OF REPLICATION.
-1- SUBUNIT: BEHAVES AS HOMODIMER IN SOLUTION.
-1- SIMILARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A., AND SEQUENCE OF 1-41.

Nucleic Acids Res. 15:2137-2155(1987).

-!- FUNCTION: THIS PROTEIN ACTIVATES THE TRANSCRIPTION OF THE ILVC GENE IN THE PRESENCE OF ACETOLACTATE OR ACETOHYDROXYBUTYRATE.

-ILVY IS ALSO A NEGATIVE REGULATOR OF ITS OWN EXPRESSION.

-!- SUBCELLULAR LOCATION: CYTOPLASHIC.

-!- SIMILARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 171 DAYMVDGKLDWAAMPVLRFGPKDVLQDRDLDGRVDGPVGRRRVSI-------

Submitted (DEC-1997) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: CONTROL OF THE LAST STEP IN METHIONINE BIOSYNTHESIS;
METR IS A POSITIVE ACTIVATOR OF THE META, METE AND METH GENES.

METR IS ALSO A NEGATIVE REGULATOR OF ITS OWN EXPRESSION.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC.

-!- SIMILARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL

REGULATORS.

"Regulation of methionine synthesis in Escherichia coli: effect of
the Metr protein on the expression of the mete and metr genes.";
Proc. Natl. Acad. Sci. U.S.A. 86:85-89(1989).
-i. FUNCTION: COMTROL OF THE LAST STEP IN METHIONINE BIOSYNTHESIS;
METR IS A POSITIVE ACTIVATOR OF THE META, METE AND METH GENES.
METR IS ALSO A NEGATIVE REGULATOR OF ITS OWN EXPRESSION. BINDS
HOMOCYSTEINE AS AN INDUCER.
-i. SUBCELLULAR LOCATION: CYTOPLASMIC.
-i. SIMILARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL
